

OPTIMA[®]

OPTIMA

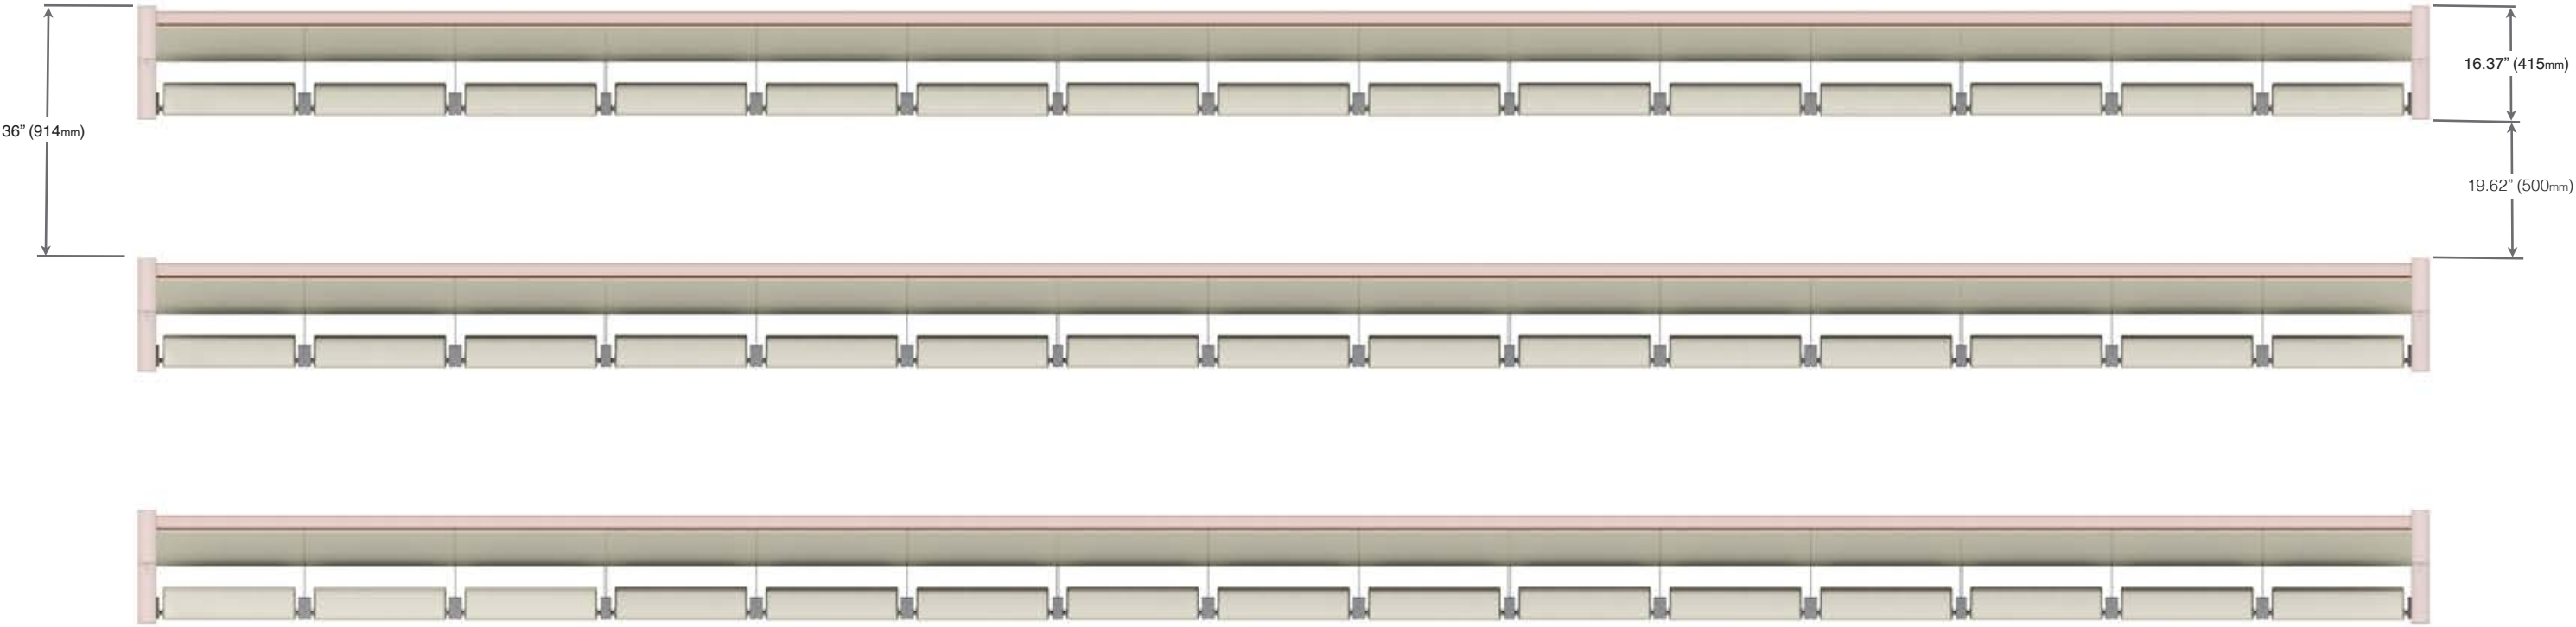

Traditional church architecture calls for traditional church seating. Yet conventional pews, steal valuable floor space which compromises seat capacity and traffic flow. SERIES designed the perfect solution with an innovative hybrid that retains the traditional look of a pew while achieving space efficiency benefits with our signature self-lifting seat. The Optima is the only product of its' kind with a system engineered to eliminate the arm dividers. As with all SERIES worship seating, accessories include accommodation for books, envelopes, pencils and communion cups

SPACE EFFICIENT

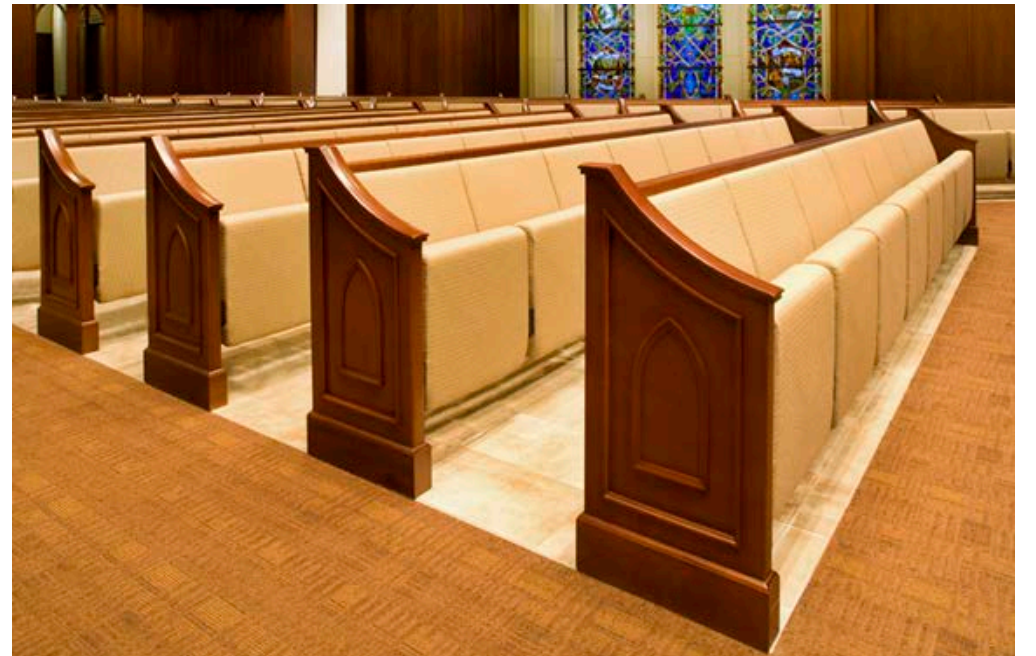

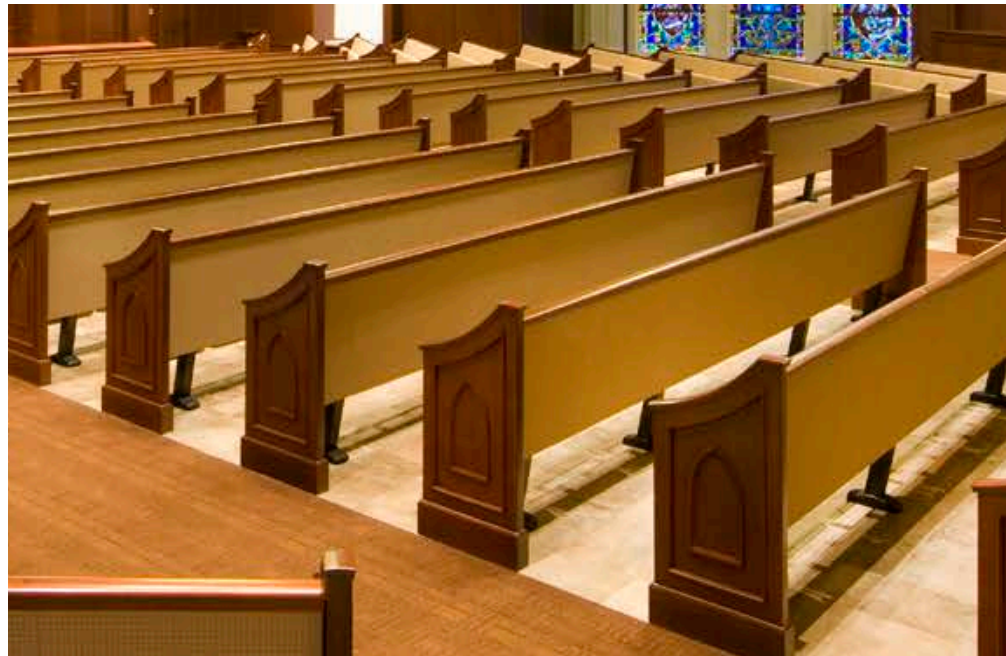

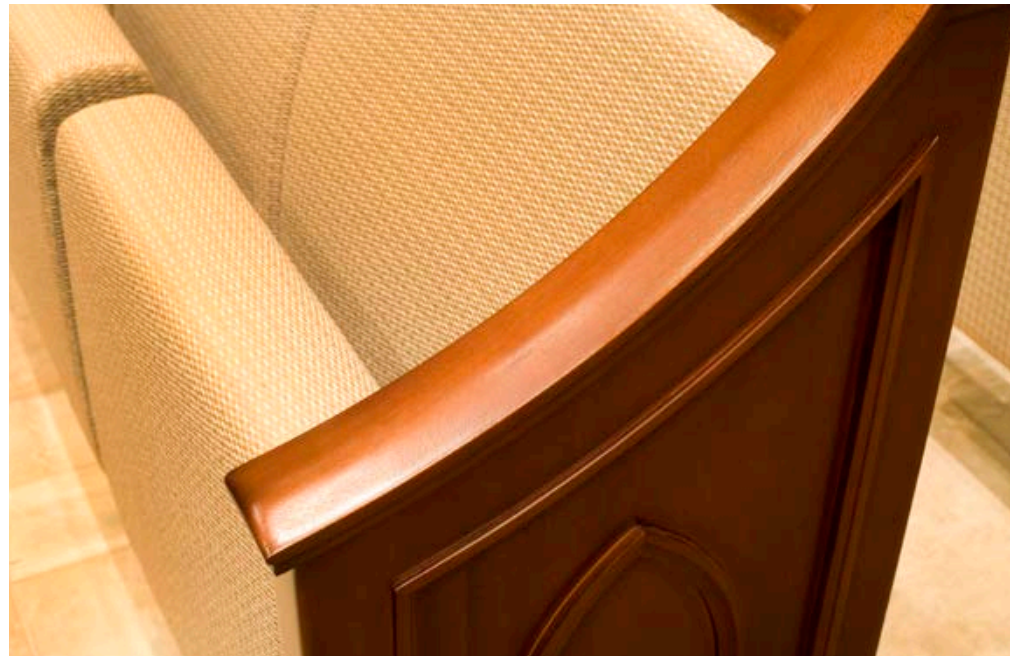

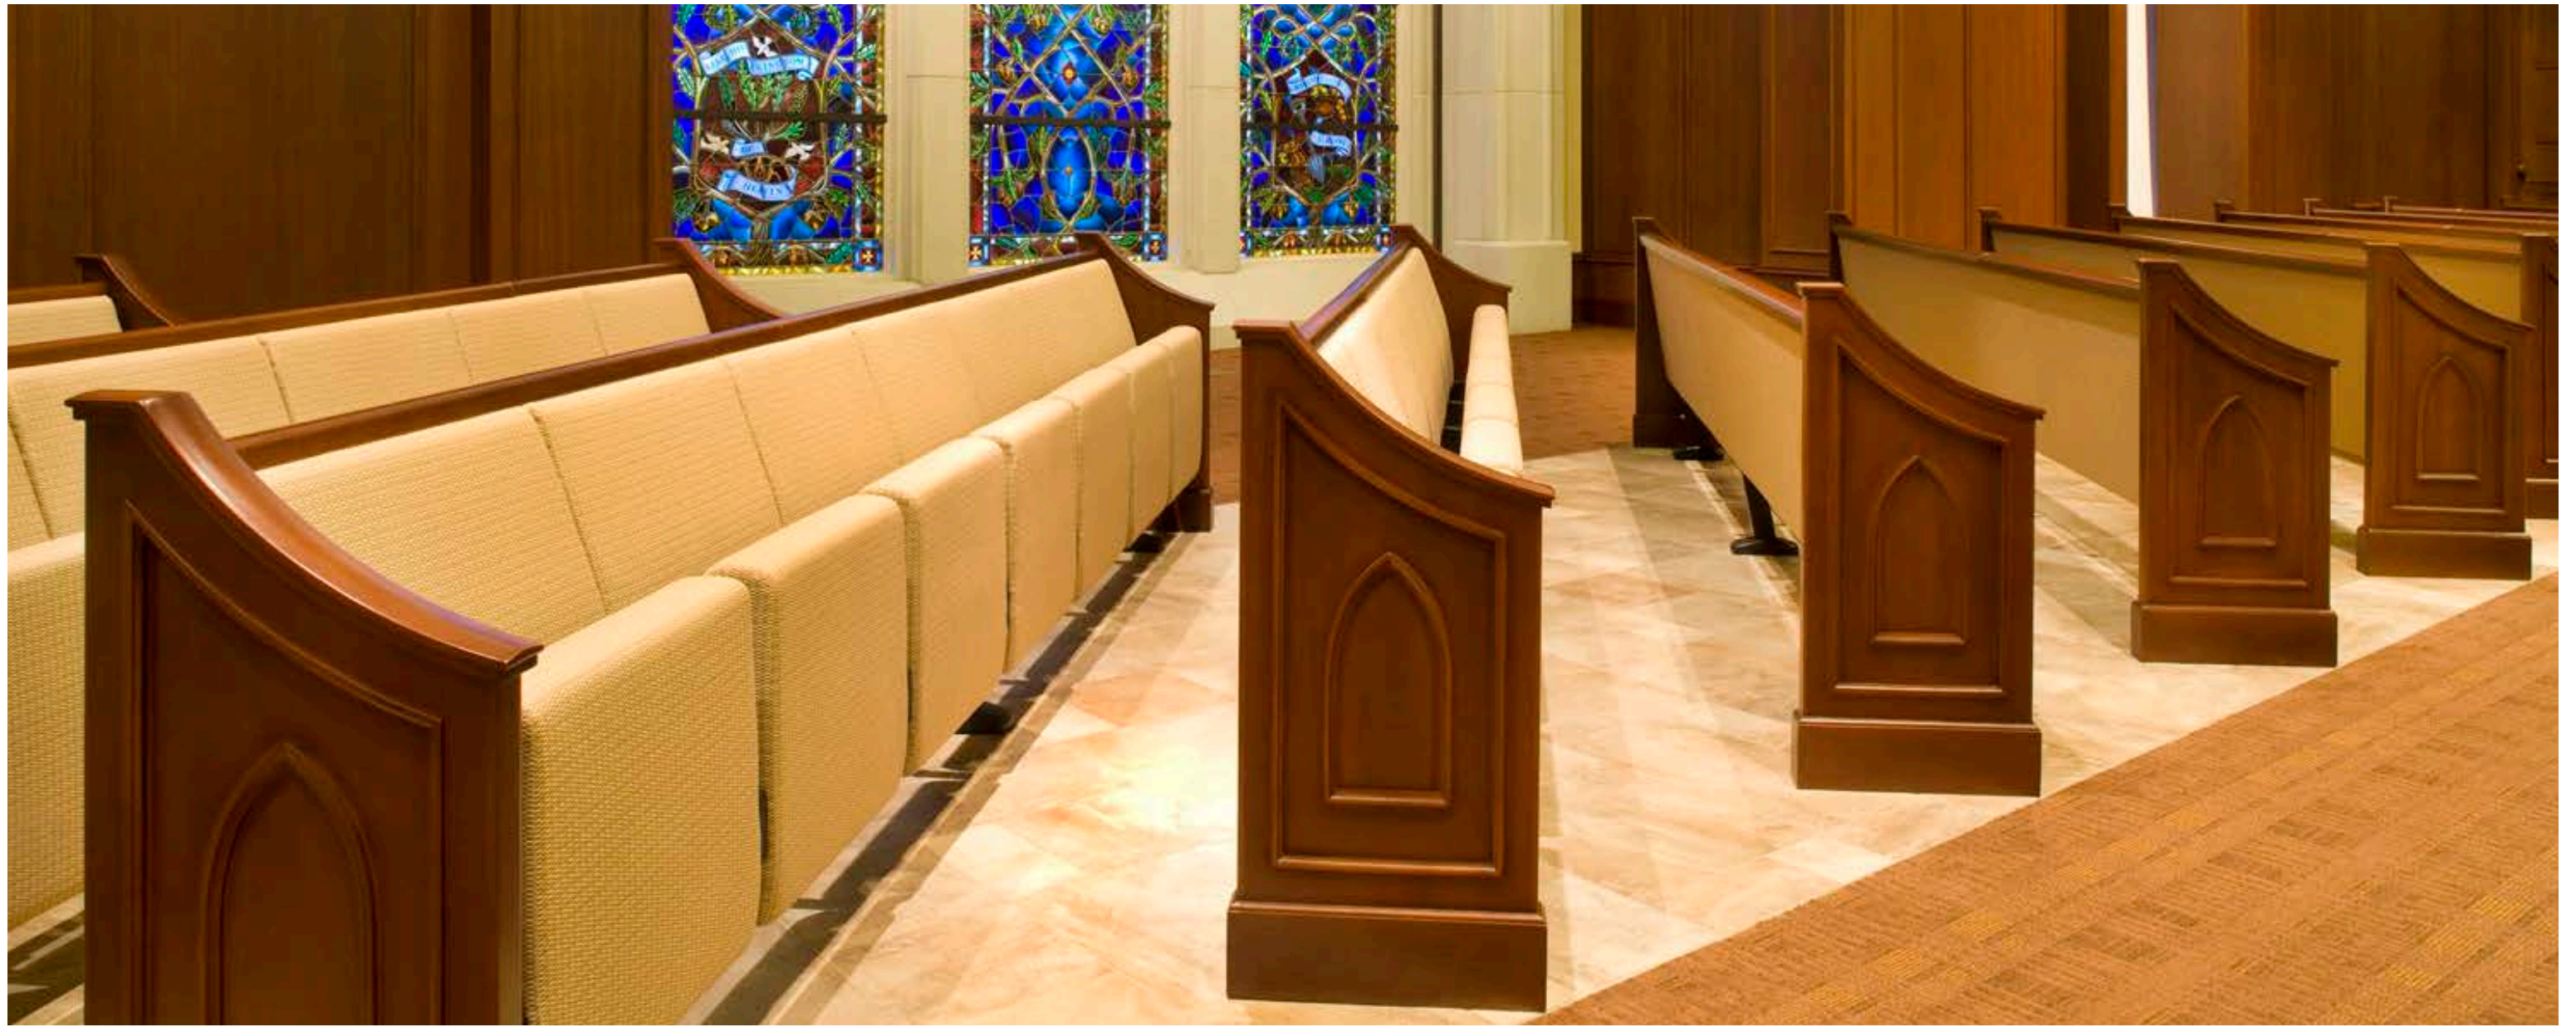

TOP VIEW

At the heart of all SERIES seating design lies the principle of Space Stewardship™. We simply recognize our responsibility of enabling the church to be the best stewards possible of this valuable real estate foot print set aside for worship. The Optima's exceptionally sleek design and tight seat envelope increases the passageway between rows from 12" on a conventional pew to over 20" which triples the traffic flow efficiency and translates to an increase in seat capacity of 20% or more.

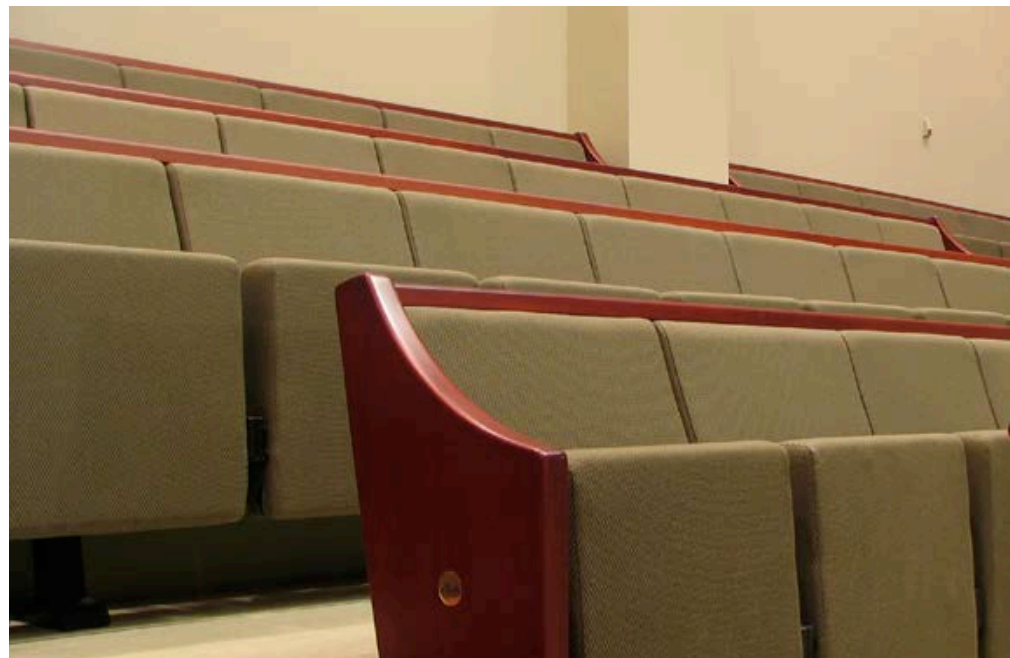

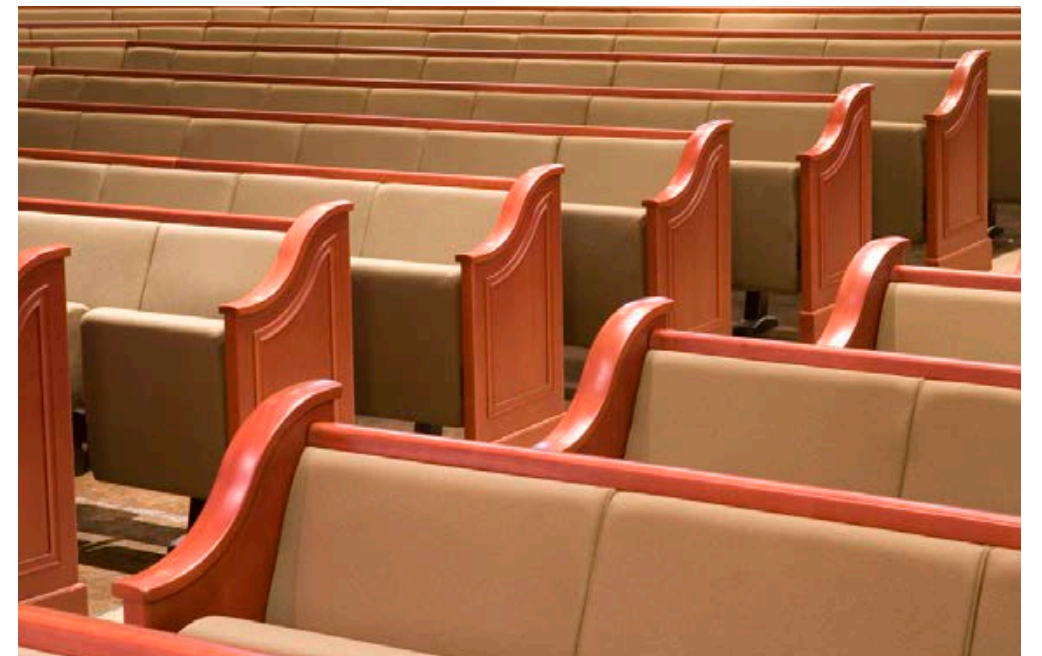

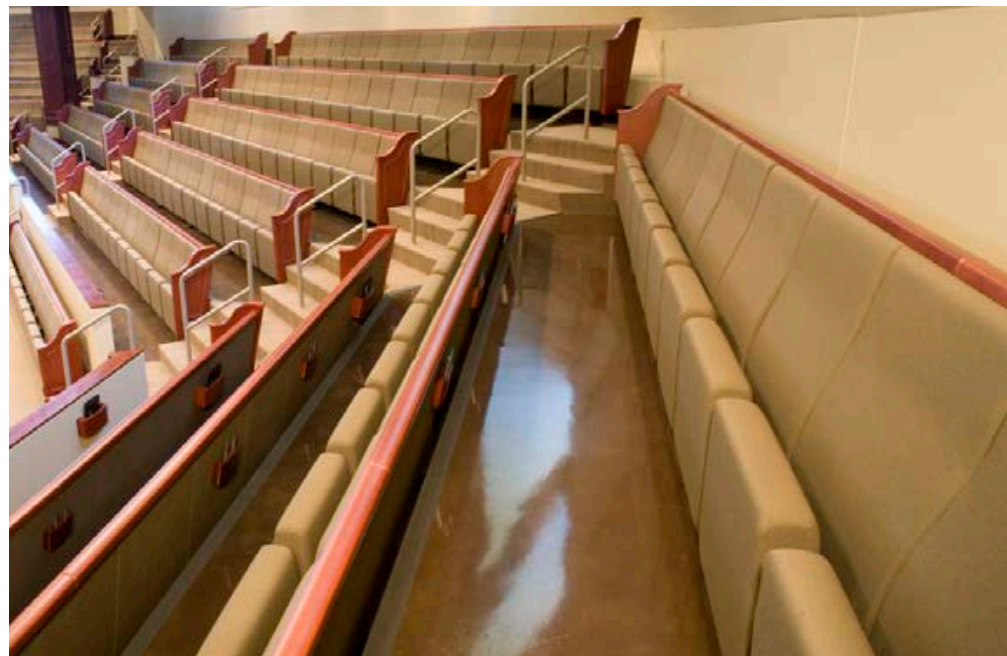

PERIMETER CHURCH - Duluth GA, USA

PANEL OPTIONS

SERIES maximizes quality control by keeping all aspects of manufacturing in-house. This includes our own Millwork department that is both skilled and customized to meet your exacting specifications. End panel options achieve compatibility with Colonial, Gothic, and Classic architecture, in a variety of hardwoods and finish selections.

BACK OPTION

The rear side of the pew backs can be finished in wood or upholstered surfaces. The wood backs and pew end cores are made with a hardwood ply construction. Both are capped with solid hardwoods at all the high impact points and face laminated with the finest veneers, selected for grain and color uniformity... the only wood construction method guaranteed not to crack, check, split or warp.
